CorpSync

Seamlessly Synchronize your Corporate Directory with your Smartphones or Tablets

The Problem

Adding or finding contacts on smartphones requires manual entry or retrieving them from an external source, which increases time spent on repetitive tasks and decreases productivity.

Our Solution

CorpSync is web-based technology that automatically updates contacts and personalized corporate information in Outlook, Android, iPhones, Smartphones, BlackBerry and any other mobile device that synchronizes with Microsoft Exchange.

Smartphones phones and other mobile devices are quickly becoming the ideal communication tool for busy professionals who like to stay in touch with their office, or when away from their desks.

With CorpSync, working with mobile devices can be more efficient. Users will no longer have to manually enter a contact's information (e.g., telephone, email, position, etc.) into the device or retrieve it from an outside source or third party application, thereby saving time and increasing productivity for all users subscribed to this platform.

Features & Advantages

- **Stay in touch** with your organization regardless of your location.

- **Receive automatic contact information** as they change in source systems and refreshes distribution lists as employees join or leave the company.

- **Resume communications** and exchange critical information with other users during network outages.

- **Increase productivity** of your field workers and employees who are frequently away from the office.

- **Browse contacts** even when there is no network connection.

- **Seamlessly integrates** with Exchange Server and BlackBerry Enterprise Server (BES).

How it works

1 Collection

The corporate contact information, from one or many sources (e.g., HR database, contact management applications, Microsoft Active Directory), is loaded or updated onto the CorpSync centralized database automatically.

2 Processing

The distribution lists are refreshed following updates to a contact's employment status, job category, title, departments, and various other fields.

3 Distribution

The contact data (vCard) is processed through PaayaTech proprietary "push services," which distributes the information to a subscriber's smartphone. Only contacts within distribution lists, to which users are subscribed to, will be pushed (e.g. Partner List).

4 Maintenance & Updates

An intuitive, web-based application that enables personnel (e.g., IT) to:

- Manage corporate information (e.g., emergency list, memos, and guidelines).
- Manage subscription lists
- Create virtual contacts (e.g., "Help Desk")
- Add, modify, delete contact information if it does not come from any source system.

About PaayaTech

PaayaTech designs, develops, and supports custom applications and enterprise-wide solutions for companies of all sizes in different market sectors to dramatically enhance user experience, foster collaboration and increase business productivity.

• *CorpSync*: Our Web-based technology that automatically updates contact and personalized corporate information in Outlook, Smartphones, or any other mobile device that synchronizes with Microsoft Exchange.

• *CorpIntake*: Our Web-based technology that captures client and matter related information in one sharable location. This expedites the process of checking for conflicts and opening a matter for a client because it allows users to view, manage, and receive information in real time.

• *EPlus*: Our Web-based application which integrates with Thomson Elite and enables users to manage day-to-day financial activities more effectively and efficiently.

•*DocBuilder*: This Microsoft Word tool bar enables users to generate legal and professional documents more in a more efficient way.

We also provide technology-enabled services to solve complex problems, provide business intelligence, integrate internal systems into one platform, and other consulting services.
